Program and class selection APIs

1. 培养方案制定功能

方法	uri	请求参数(json)	返回参数(json)	说明	
PUT	???	uid:String[] (required)	status: String	为某个用户添加培养方案	
PUT	/program/course	cid:String[] (required) pid:String[] (required) uid:String[] (required) type:Integer[] (required)	status:String	在培养方案中添加课程	
DELETE	TE /program/course cid:String[] (required) pid:String[] (required)		status:String cid:String cname:String uid:String	在培养方案中删除课程	

2. 选课相关

url请求参数举例。如findByboth:

不需要学期和年份时: /classes/search/findByBoth?courseName=Data%20Structure,teacherName=Root需要学期和年份时:

/classes/search/find By Both? course Name=Data %20 Structure, teacher Name=Root, year=2017, semester=FIRST, which is a substant of the property of the prope

方法	uri	请求参数(json或url)	返回参数(json)	说明	身份
GET	/classes/search/ findByCourseName	url: name year(not required) semester(not required)	List { id: Long year: Integer semester: enum capacity: Integer numStudent: Integer courseld: String courseName: String teacherName: String timeSlot: String classroom: String }	按课程名称搜索 semester="FIRST" or "SECOND"	学生
GET	/classes/search/ findByCourseld	url: id year(not required) semester(not required)	同上	按课程ID搜索 semester="FIRST" or "SECOND"	学生
GET	/classes/search/ findByTeacher	url: name year(not required) semester(not required)	同上	按老师名称搜索 semester="FIRST" or "SECOND"	学生
GET	/classes/search/ findByBoth	url: courseName teacherName year(not required) semester(not required)	同上	按课程名称和老师一起搜索semester="FIRST" or "SECOND"	学生
GET	/course/search	url : name	List:{ cid: String name:String credit: Float brief: String}	返回一个列表,里面包含课程号、课程名称、 学分和简介	学生
POST	/classes/register	json: classld: Long	status:String	选课	学生
PUT	/classes/confirm	json: uid:String[] classId: Long	status:String	确认 选上 此课程,uid是学生的id	管理员
PUT	/classes/finish	json: uid:String[] classId: Long score: Integer	status:String	确认完成此课程,uid是学生的id	管理员/ 老师
PUT	/classes/fail	json: uid: String[] classId: Long	status: String	确认某课已挂,uid是学生的id	管理员/ 老师

3. 选课功能
